Dear Al Faisal Second Year Medical Students, this post and the following comments contain some important Notes and Questions regarding your NEUROSCIENCE PHASE II EXAM.

Notes:

- Your main focus is Pathology > Pharmacology > Clinical > Anatomy.
- Where to study from? … Slides are enough to get an A with your notes if you have any.
- Since there is not much pathology to study, you have to know it by heart.
- For Dr. Hindi, study his slides and your NOTES! … For Dr. Ahlam, you main source is the SLIDES only.
- Regarding Pharmacology, you have to study it by heart because there will be from 30-40 questions (MCQs).
- For the Clinical lectures, you have to study them all, they all are very important. From 30-40 questions in the MCQs were clinical.
- For anatomy, you need to know the blood supply IN DETAILS! + you have to know what may happen if an artery is blocked.
- For Brain Tumors, you need to do a TABLE to organize your thoughts including… Percentage – Age – Prognosis – Appearance on Imaging – Common/Rare – Genetic Factors – Origin – Grading – Benign/Malignant – Most common involved site.
- It is a MUST that you study ALL your PBL cases, all the drugs mentioned … All the interpritations of the images because they are going to be almost THE SAME In the EXAM.
- There will be 2 attached presentations containing questions you MUST study and review.
- Batch representatives, INBOX ME YOUR AU EMAILS TO SEND YOU THE POWERPOINTS + THIS DOCUMENT SO THAT YOU FORWARD IT TO ALL YOUR COLLEAGUES.

Questions & Notes:

1. You will be asked about the types of meningeocele … know them all and how they APPEAR! … you will be given a picture and will be asked to tell what is this :D ? (100% EXAM)
2. Make sure you know the CSF circulation within the ventricles.
3. You need to know the levels of the spinal cord and the levels of spinal segments.
4. You MUST know the major spinal tracts (motor and sensory).
5. For the dorsal column, spinothalamic, corticospinal and spinocerebellar, you MUST know their course, at what level they are ipsilateral or cross to the other side, contralateral…. And what will occur if an injury occurred at a certain level.
6. What is the difference between upper and lower motor neuron lesions? When do we have flaccid and when do we have spastic paralysis? (100% EXAM)
7. You need to know at what spinal level injury an assisted ventilation is required.
8. At what level in spinal cord injury a patient can have paraplegia?
9. You MUST know the difference between complete and incomplete spinal cord syndromes [Brown Sequard Syndrome] (100% EXAM).

10. You need to know that blood supply to the brain is not regulated by the autonomic nuervous system, it's regulated by metabolites of the brain like CO2 and O2.
11. You MUST know the blood supply to the brain with all the main branches. (EXAM)
12. What forms the circle of Willis? (100% EXAM)
13. There will be an MR Angiogram and you will be asked to identify a certain blood vessel. (100% EXAM).
14. You MUST know the 4 names of the Internal Carotid Artery and where do we call them as such (Cervical – Petrous – Cavernous – Supraclenoid/Cerebral).
15. You MUST know what will happen in case PICA is damaged. [lateral medullary syndrome – contralateral pain and temperature – epsilateral sensation of the face – problems in walking – affected ambegeous nucleus] (100% EXAM).
16. What will happen if … the labrynthine artery – RAH – ACA – Posterior cerebral is damaged?
17. You MUST know what will happen if (Anterolateral group – Recurrent artery of Heubner – Anterior Chorodial) are damaged? (100% EXAM).
18. You need to know that the most common arteries that get hemorrhages are in the anterolateral group.
19. What is the most common type of intracerebral hemorrhage? (100% EXAM).
20. What is the difference between epidural and subdural hemorrhage, how do we differentiate between them on CT scan, and what are the predisposing causes? (100% EXAM).
21. What is Conus Syndrome? (EXAM)
22. You MUST know the outcomes of Internal capsule injury very very carefully!
23. What may happen if there's a thalamic injury?
24. When do we have hypokinesia and when do we have hyperkinesias? (100% EXAM)
25. You MUST know the difference between intrinsic and extrinsic tumors… Extrinsic from the meninges and intrinsic from the nervous tissue).
26. What is KI67?
27. In what tumors do we find resetting?
28. What is the most common tumor that causes epilepsy? (100% EXAM)
29. What are the 3 most common tumors that happen in children and posterior fossa? (100% EXAM).
30. Inhancement of the dura is characteristic of …….. ?
31. What is the most common tumor in the CP angle? (Exam)
32. What is the characteristic stain for Schwannomas? (100% EXAM) [S100]
33. Where does NF1 mostly happen?
34. What is the plexiform characteristic of? (EXAM)
35. You MUST know the lab investigations for bacterial and viral meningitis and their indications and interpretations… CSF sampling investigations. (100% EXAM)
36. You MUST know the most common organisms causing meningitis in neonates, young, adult and old age. (100% EXAM)
37. For A7lam's lecture, know everything she puts, especially colored, bold and underlined words.
38. PARMACOLOGY:::
39. You need to know the difference between local and general anesthesia, the different routes of administrations and examples of each.

40. You MUST know the FOUR stages of GENERAL ANESTHESIA. (100% EXAM)
41. You MUST know the meaning and importance of blood-gas partition coefficient & MAC. (EXAM)
42. What drug causes malignant hyperthermia? Enflurane (100% EXAM)
43. You MUST know that fentnyl causes trunkal rigidity.
44. You MUST know the difference between μ & κ receptors, what drugs activate them and which ones depress them? (100% EXAM) … Mu → Inhibition of respiration … k → psychotomimetic effects.
45. You MUST know the difference between endogenous and exogenous opioids!
46. Codeine is effective because it has a reduced 1st pass metabolism… yet, it's least potent.
47. What is the metabolite of morphine? (EXAM)
48. What drugs are metabolized by the P450 system?
49. You need to know that fentanyl is useful in CV surgery (EXAM)
50. What drug causes psychotomymetic effects? (pentazocine) (100% EXAM)
51. You MUST know the cause of parkinsons disease.
52. Levodopa causes cardiac arrhythmias.
53. MAO inhibitors are contraindicated with Levodopa because they cause hypertensive crisis. (100% EXAM).
54. You MUST know the action of MTPT (EXAM)
55. Generally, you need to know all strategies for treating Parkinson's disease and the drugs involved in each strategy.
56. You MUST know the pathogenesis of Migraine.
57. You MUST know the drugs used in EACH stage in migraine and when is the best time for treatment. (100% EXAM)
58. What is the action of Methylxanthine? (100% EXAM)
59. What is the most effective bronchodilator? Theophylline (EXAM)
60. Substituted amphetamines cause hyperthermia!.
61. You MUST know what epileptic drugs Inhibit Na channels … enhance GABA transmission … reduce glutamatergic transmission … Inhibit Ca channels. (EXAM)
62. What drug is also used to treat phantom limb syndrome? (Carbamazepine) (EXAM)
63. You really need to know EACH SINGLE DRUG IN DETAILS BECAUSE THERE WERE SOOOOOOOOOOOOOOOOO MANY QUESTIONS REGARDING PHARMA!!!
64. For CLINICAL::: you need to know everything and clinical aspect is really important … I am not going to mention each single point but I will mention what was in our exam…
65. What's the Glasgow Coma Scale used for? … what is the lowest score? … What is the highest score? (100% EXAM)
66. You will be given an EEG number and you will be asked to say if it's left or right and on what lobe is it placed. (100% EXAM)
67. You MUST know the different types of seizures … you have to know what's status epileticus. (EXAM)
68. What is Brudzinki's sign and what's Kernig's sign?

69. 3 questions came from the "Pyeloneuropathy" lecture… Carpal Tunnel syndrome … Tarsal Tunnel syndrome .. Peroneal Neuropathy … make sure you know the NERVE affected and its LOCATION and what are the manifestation of each! (100% EXAM)
70. Two question came for CSF interpretation … know the ifference between BACTERIAL and VIRAL!!!
71. For PSYCHIATRY::.. They will be in scenario forms and you will be asked to choose the correct term…
72. You will be asked about the meaning of Autonomy. (100% EXAM)
73. What is … Neolgism?
74. What is the difference between mood and affect? (EAXM)
75. What is the difference between illusions and hallucinations? (EXAM)
76. What is Euphoria – Anhedonia – Nihilism – Psudological fantastica? (100% EXAM)
77. How is Schizophrenia diagnosed? (100% EXAM)
78. What is Dysthymia?
79. What is bipolar disorder and OCD? (EXAM)
80. In Monozygotic twins, 40%-50% may be Schizophrenic and 80% may have Bipolar Disorder.
81. Drift Theory: Psychiatric disorder → poor economic status.
82. Lifetime risk of developing one episode of psychiatric disease is 1/3.
83. The most common psychiatric disorder is Anxiety. (100% EXAM)
84. 15% of hospitalized patients will have psychiatric disease.
85. For SAQs, You will be given a case of Meningitis giving the differential … interpret the results … and give the most common organisms involved. (100% EXAM)
86. You will be given a question regarding a degenerative disease ALS … Know everything about it … every everything… you will be asked about ULM and LMN lesion … TYPES OF APHASIA! … (100% EXAM)
87. You will be given a case of CEREBRAL STROKE … you will be asked about the type of hemorrhage if present … the possible artery to be clogged … and the management … the action of Mannitol … and the findings on CT scan.
88. Study hard even if you did not do anything and you only have 1 day left … I studied for Neurophysiology Exam ONE DAY BEFORE THE EXAM and I managed to pass ;) …
